

LIGBT Lane Patterns

The LIGBT is very fortunate to have as one of its sponsors the leading lane conditioning company in the world; Kegel. As part of our partnership Kegel works with the host manager and LIGBT promoters to design a specific shot for each LIGBT event.

As most bowlers know there are many factors that determine the scoring environment at a bowling tournament. Many of these factors (lane surface, temperature and humidity) plus human contact cannot be controlled by the LIGBT. This is why we caution everyone the lane pattern posted should be **used as a guideline** and may play very differently than was expected.

PATTERN FOR AMF BABYLON (Thanksgiving Weekend)

The AMF Babylon 2-day event will use Kegel's Broadway Pattern which is 37 feet in length. Since this is a medium to short condition, with light oil volume on the outside portion of the lanes, players can arrive at the pocket from multiple directions. Expect scoring to medium to a little above average.

PATTERN FOR HERRILL LANES (Sun., December 5TH)

The Herill Lanes tournament will use the PBA Chameleon Pattern which is 39 feet in length. The oil for this condition is placed in "zones" which allows multiple-angles to play and lets players choose a specific area where they are comfortable playing. Expect scoring to be middle range.

PATTERN FOR AMF SAYVILLE (Sun., December 19TH)

The AMF Sayville tournament will use Kegel's Beaten Path Pattern which is 41 feet. Because of the long oil length the best area to play is usually where the highest friction part of the lane surface is (the worn area or track.) Scoring on this condition can be difficult if you play the wrong part of the lane. Expect scoring to be below average.
